

The Widget

VEHICLE SECURITY SYSTEM

Immobilizer Data Sheet

Name: The Widget Immobilizer

Concept: Battery Mounted Vehicle Security System

Description: Aftermarket vehicle security has been a high volume industry for many years. As long as vehicles are stolen there is opportunity for growth of this sub-market. The Widget overcomes challenges for many current security product representatives (labor, knowledge-base, installation error, ongoing service) with a non-invasive single SKU solution. Aftermarket agents and distributors previously un-involved in aftermarket security now have an easy to implement security option to compliment any product menu. The Widget is also an excellent option to bundle with other products to maximize customer share.

Advantages: No wires to test, cut, or tap. No programming required. Installation components supplied. One SKU fits all. Customer programmable option for passive arming feature. Chirp confirmation when armed or disarmed. Complete vehicle immobilization.

Packing Information:

1 pc white box size: 8.75" length 6" width 2.25" height
unit weight: 1.55 lbs
